

Purpose: Creating a responsive advertising website for different services offered to customers in related areas.

Description: The website should be able to successfully sign up users, login users, post users' advertises and keep track of users. The application is an event management form which is a hybrid application made with Ionic 4 and Angular in Webstorm. Each user can sign up as a customer or service provider at the beginning. Then the users need to login in order to find a related service provider and to connect with them and to offer a service to users.

We used as an example platform.

Our roadmap can be found here: <https://trello.com>

Front end:

- Sign up page
- Login Page
- Home Page
- Search Page
- Contact Page
- Logo for the Website

Back end:

- Sign up Page
- Profile Page
- Log out Button
- Retrieve Password
- Toasts on every page
- Permanent Link to go to Profile
- Business Page
- Query for database on Search page

Issues and Solutions:

- *issue:* Home page is not compatible for mobile.
solution: Adjusted code.
- *issue:* Contact page does not send the contact form as an email.
solution: Not solved yet.
- *issue:* async callbacks
solution: promises and unsubscribing (otherwise it could lead to a memory leak)
- *issue:* The use of dynamic content based on sessions after the user has been authenticated
solution: Not solved yet.
